

**Historian,
analysis, reports**
**From data
to information**

ACRON –
Analysis and reports to optimise your processes

- Cross-system analysis
- Document-quality evaluation with reporting
- Plant-wide long-term archiving

VIDEC.

The lifeblood of your plant

The challenge

Data are the lifeblood in any automated system. They form the basis for the entire logging, analysis and any proof of quality.

Data are the basis for the optimization of operational processes and for the increase of productivity, quality, safety and profitability of investments.

A reliable and complete data collection forms the basis for all business activities and is thus crucial for success and further growth.

Your requirement

You want to keep the efficiency and operational safety of your systems in view at all times? You need fast, easy-to-read and comprehensive data access with effective analysis and evaluation functions? You want to monitor processes online, determine weak points or energy savings potential and make your operational processes more reliable and economical?

For this, you need a system which safely and reliably collects, compresses and processes your data. A system that offers you comprehensive visualization options with high user-friendliness and thus ensures a fast and effective analysis of your processes.

With ACRON, we have developed a solution based on your requirements which has proved itself across industries and countries. The lifeblood of your plant.

Aggregated information – the basis for efficiency and success

The solution: ACRON

With ACRON, you can bring all of the data and information of your plants together efficiently and thus form the basis for well-founded evaluation and analysis processes. The extensive feature set allows you to analyse and optimise your plants and operational processes precisely, safely and in a custom-fit manner. Also, evaluations and reports can be created on ACRON.

ACRON is characterized by intuitive manual handling, flexibility and fast configuration. The client/server architecture, a high level of data security and operation, as well as the scalability, provide further advantages. There is also a high level of availability with a good price-performance ratio. As a manufacturer-neutral product and thanks to its universal conception, ACRON can be applied in almost all industries.

With ACRON you can

- Aggregate, backup and archive data across systems
- Perform extensive evaluations and analyses
- Create meaningful reports
- Optimise processes and increase productivity

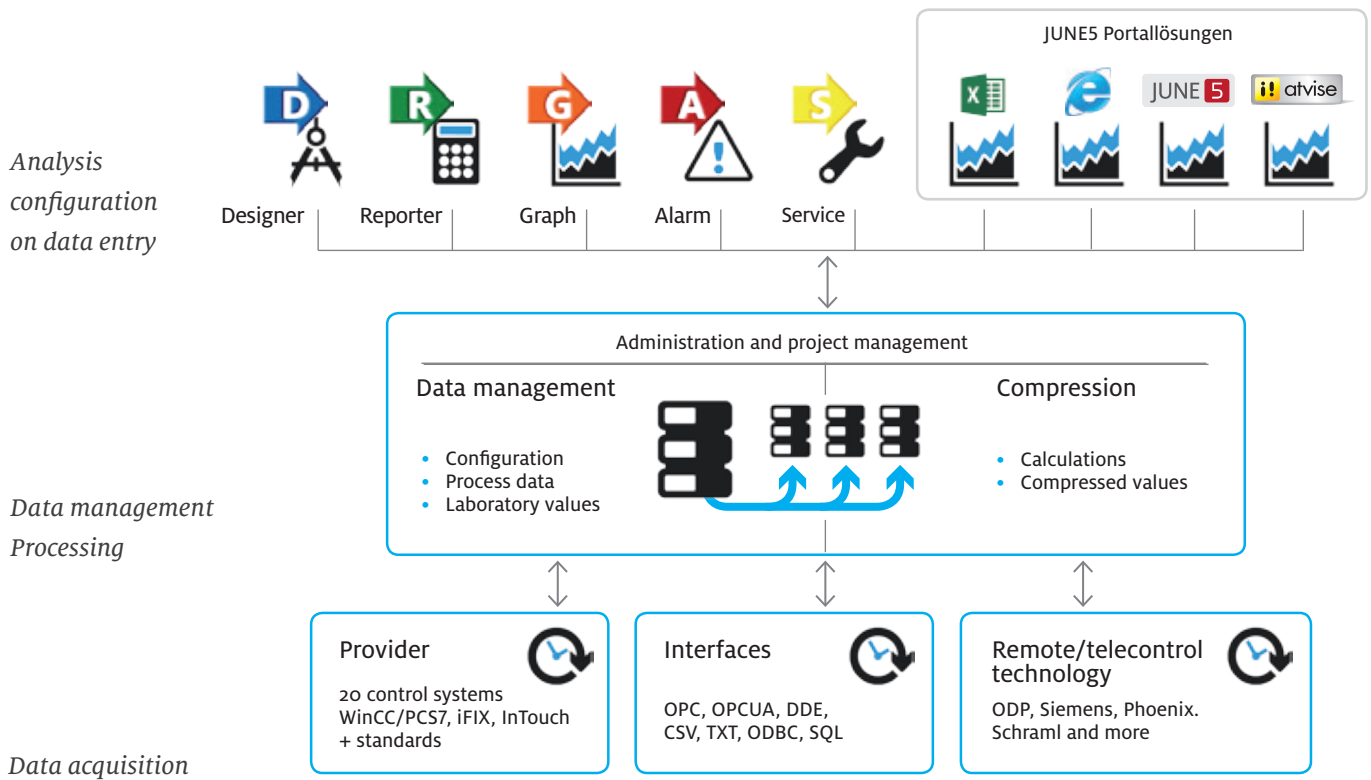

ACRON has been designed on the basis of continuous discussions with users. The system combines practical experience from 20 years of continuous development in its design, performance capability and its functional scope.

Your advantages

- Multi-server/multi-client concept with high performance and very short response times
- Time-oriented and/or change-oriented recording with time resolution in the millisecond range
- Arithmetic operations with over 100,000 data points are possible
- Maximum safety thanks to three-level cache and redundant database with data backup on various data carriers
- Finely broken-down user administration
- Low memory requirements
- Fast payback due to excellent value for money and cost reduction for service and maintenance

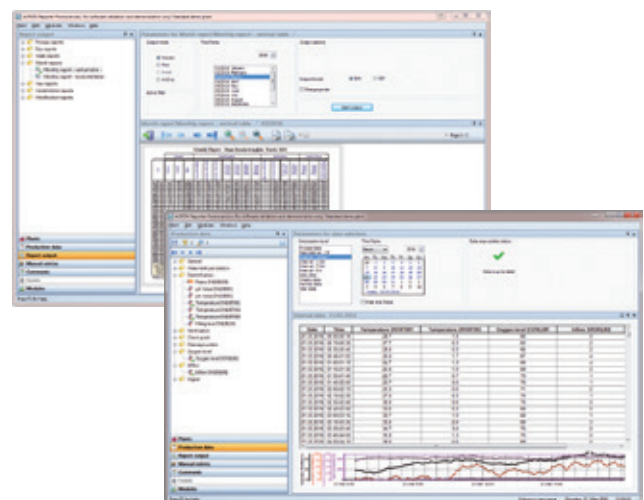

Modules + Functions

ACRON has a rugged and fault-tolerant client-server architecture. The software is scalable and can grow with requirements. Thanks to its modular construction, ACRON covers all requirements of historical data processing - from the smallest applications right up to large distributed systems.

Flexible data acquisition

The ACRON Provider module ensures data acquisition from any sources. Through open and dynamic data exchange standards, ACRON ensures interoperability and platform independence. Networking via OPC (HDA and UA) and DDE is possible as well as the integration of ethernet, industrial ethernet and many other protocols from industry.

With ACRON Provider, more than 20 different control systems can be connected - even in parallel. A variety of functions ensures optimum performance and data security, such as data pre-treatment in the work memory, or three-level cache (TLC).

Convenient user interface

ACRON Reporter provides you with a variety of tools and applications in a clear environment, e.g.:

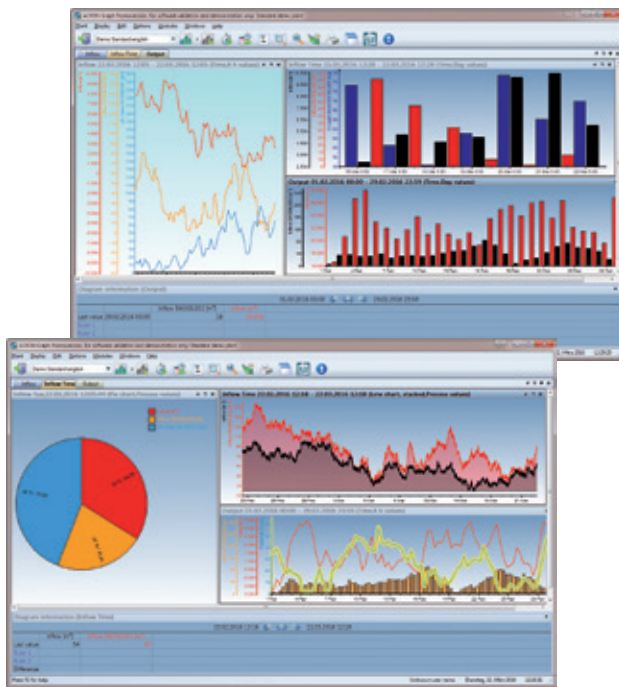

- Display reports, protocols, and graphs
And print them
- Hierarchical plant overview
- Create data backup and export
- Record manual inputs (laboratory values)

Comprehensive evaluation

In the ACRON graph module, you have access to comprehensive and user-friendly diagrams in curve progressions. Measuring points, minimums/maximums and other statistical evaluations can be identified differently by various markers, e.g.:

- Display of digital variables in the diagram
- Extensive statistical evaluations
- Multiple x and y axes, also with time offset

The module enables very fast access to historical or online data and full analysis.

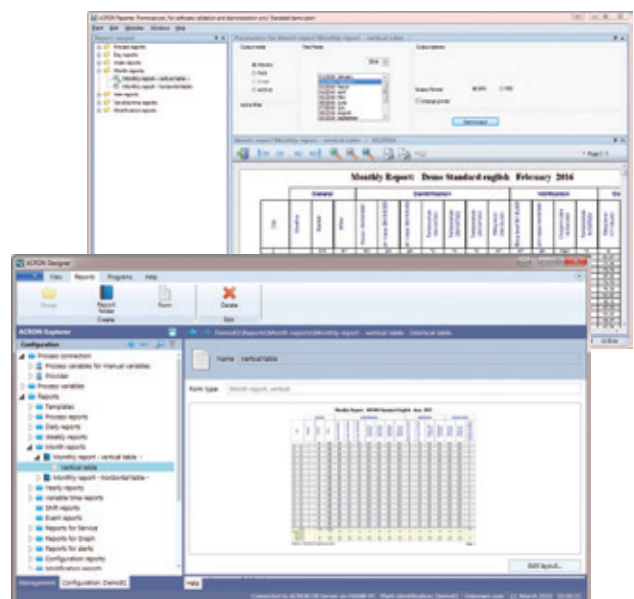

Complete report creation

ACRON creates meaningful reports over freely-selectable time ranges from the process data. Useful compression algorithms generate continuous data for daily, weekly, monthly and annual reports. Time variable reports (e.g. for layers) can also be generated.

Special report types are also taken into account. So, for example, event or batch reports can be determined by the start and end-conditions, as is commonly used in the process and food technology as well as in discrete manufacturing application. Additional report and application examples are available from different sectors.

The form wizard also supports the fast and comfortable creation of complex reports and reduces the configuration time by a multiple. Almost all protocols and calculations are possible.

Precise process planning

With the service/PDCA module (Plan-Do-Check-Act), the creation of all necessary error and alarm reports and their comprehensive statistics is possible as well as support of the PDCA cycle for the DIN EN ISO 50001.

In the service/PDCA module, operating times, run times and switching cycles are stored, summed up and transferred into a predictive maintenance. Complete unit histories can be mapped. Simple time and cost registration rounds off the functions..

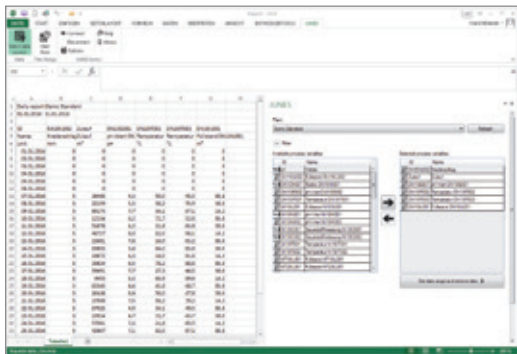

Integration + Interfaces

Networked communication

Comprehensive native control system connections, OPC, DDE, OPC UA, ODBC, ASCII, CSV and many vendor-specific PLC / DDC protocols are available for data recording. ACRON data can be accessed through standard ODBC and OPC DA.

Over 20 direct connections to the HMI/SCADA and control systems are implemented and constantly expanded using certified interfaces (atvise, iFIX, WinCC/PCS7 etc.). Various telecontrol protocols can be operated via different connections. Programming of data with the time stamp is a standard feature in ACRON, making, for example, the connection to the telecontrol platform ODP (GPRS) or SINAUT (Siemens) possible without any problems.

Also, all data on the commercial software level is available on the web service interface (PPS-systems, SAP, etc.).

Fast access to data

The ACRON Excel Add-In enables convenient access to all data in ACRON for simple and fast programming of values. Further evaluations embedded in the MS-Excel® environment are very simple to create.

The query mechanisms are clear and easy to parameterise. On the JUNE5 interface, large amounts of data can be made available from ACRON.

Effective interaction

In combination with the portal solution June5, ACRON database information is available on any web frontends.

JUNE5 provides the end user with reports, graphs and captured hand values both for the mobile area as well as on the desktop. The following aspects were decisive in the development:

- No plug-in necessary for the browser (client)
- High data security, secure communication
- Less effort in implementation and parameterisation
- Intuitive operation
- High Performance
- Multi-client capability

JUNE5 verfügt über sämtliche Mechanismen einer sicheren Kommunikation über das Internet/Intranet. Im abgestimmten Zusammenspiel mit ACRON steht eine Benutzer- wie auch eine Mandanten-Verwaltung zur Verfügung.

Weitere Informationen sind auf unseren Prospekten und Datenblättern zu JUNE5 erhältlich.

Cross-industry use

ACRON meets the standardisation, legal requirements and regulations for a wide range of industries (e.g. DIN EN ISO 50001, DWA M260, A216, 21 CFR Part 11, TA, Waste, EKVO etc.). Of course, an audit trail is possible.

Due to the high level of flexibility, ACRON ensures that even individual layouts can be connected quickly and easily with process values. With this, ACRON enables access to clear information coordinated to the specific requirements of the user.

ACRON has been used successfully in almost all sectors, for example:

Environment

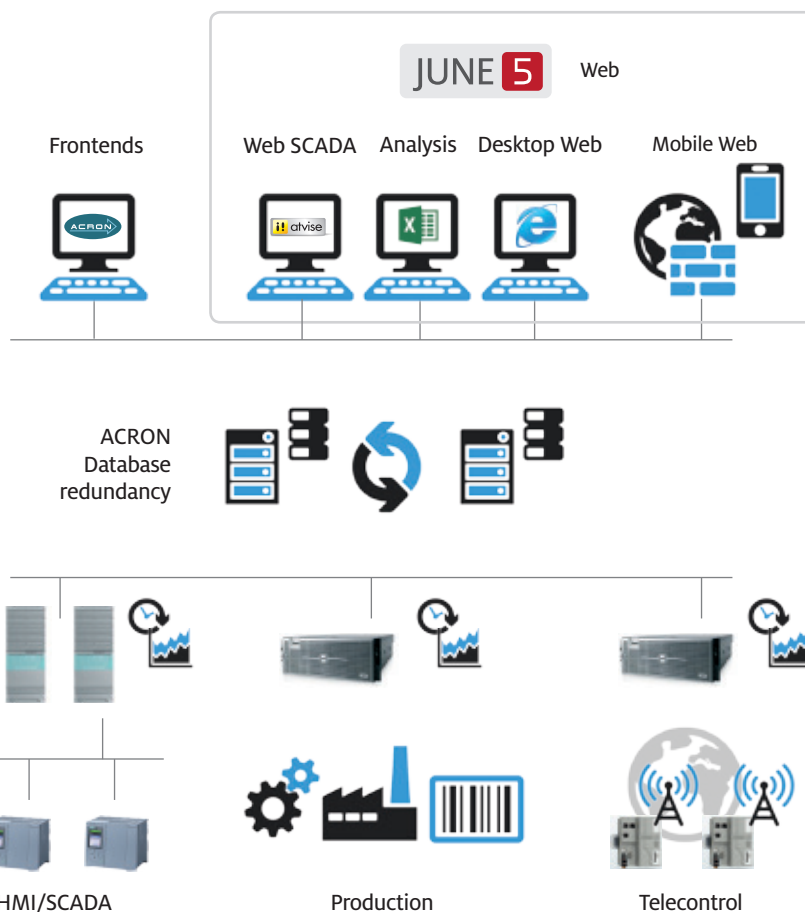

- Water and sewage
- Waste disposal/incineration
- Landfills or in the area of exhaust air

Energy

- Energy production/energy distribution
- Energy data management / ISO 50001

Industry

- Food and beverages
- Pharma with 21 CFR Part 11, Chemistry
- Tunnel technology, cavern construction, pipelines
- Oil, gas and petrochemical industry
- Automotive
- Building automation
- Mechanical engineering
- Discrete manufacturing (part production)

Different language versions (Unicode-based) and the ability to change the language even within the project make ACRON suitable for internationally-active plant and machine engineering.

With ACRON you can

- Aggregate, backup and archive data across systems
- Perform extensive evaluations and analyses
- Create meaningful reports
- Optimise processes and increase productivity

Your advantages

- Multi-server/multi-client concept with high performance and very short response times
- Time-oriented and/or change-oriented recording with time resolution in the millisecond range
- Arithmetic operations with over 100,000 data points are possible
- Maximum safety thanks to three-level cache and redundant database with data backup on various data carriers
- Finely broken-down user administration
- Low memory requirements
- Fast payback due to excellent value for money and cost reduction for service and maintenance

Conversion tools for

- OSI PI, CAS server, Industrial SQL,

You can find further information about ACRON on our website www.videc.de.

Connections

- Siemens – WinCC / PCS7 (certified), WinCC flexible, Sicam 230, Power CC flowmeter Sitrans MAG 8000
- GE – Proficy iFIX, GE – Cimplicity
- Certec – atvise web HMI
- Schneider – InTouch
- Copadata – ZenOn
- USDATA – Factory Link
- Axeda – Wizcon
- Gossen Metrawat – ECS
- ABB – Sattgraph
- Universal OPC DA/AE/HDA
- Universal OPC UA
- Universal ODBC
- Universal file import CSV/TXT/XML
- More on request

ACRON service contracts

For our customers we provide the update service ACRON Secure. Here, you receive continuous support and uninterrupted update service at a fair price.

You can find more information on our website at www.videc.de and at www.acron8.com
Here, you can also request more current documentation

ACRON partner programs:

We offer the following partner contracts to our system partners/system integrators :

- ACRON Solution Provider
- ACRON Premium Partner

Please ask for the framework conditions of a partnership.
